

ARUL DESHWAL

Sector 84, Faridabad, India | +91 80763 55239 | aruldeshwali@gmail.com | [Linkedin](#) | [Github](#)

SUMMARY

CS undergraduate (8.6 CGPA) seeking SDE/MERN intern roles. Experienced in building full-stack MERN/Next.js applications, designing RESTful APIs, and structuring PostgreSQL/MongoDB databases. Specialized in integrating AI/LLM capabilities (RAG, OpenAI) with a strong C++ DSA foundation.

CORE SKILLS

Languages: JavaScript, TypeScript, C++

Frontend: React.js, Next.js, Redux, Responsive UI Design

Backend: Node.js, Express.js, RESTful APIs

Databases: MongoDB, PostgreSQL, Redis, Drizzle ORM

Generative AI: LLM Integration, RAG (Retrieval-Augmented Generation), Prompt Engineering, Vercel AI SDK, Vector Databases

Tools & Cloud: Git/GitHub, Docker, AWS (Basics)

Problem Solving: Data Structures & Algorithms (C++)

EXPERIENCE

AI and ML Intern — Kodacy

Sep 2025 – Oct 2025

- Built an AI sentiment analyser in Python to process and classify large-scale text data from the Kaggle Sentiment140 dataset.
- Implemented data preprocessing pipelines — normalization, stemming, and labelling — to improve text data quality before model training.
- Designed model validation protocol using an 80/20 train-test split to produce unbiased performance metrics and robust generalization.
- Achieved 77.6% classification accuracy on the evaluation set through iterative data tuning and architecture adjustments.

PROJECTS

Jobber-AI — Job Application Management System

MERN Stack, OpenAI GPT, Upstash Redis, Clerk | Apr 2026 – Present

- Integrated OpenAI GPT models to automate job description summarization and surface insights, reducing manual effort in tracking application requirements.
- Built a server-side PDF parsing engine that extracts resume content and maps it to user profiles for AI-driven skill matching.
- Developed a responsive drag-and-drop Kanban interface with @dnd-kit for real-time application status tracking.
- Implemented a "Smart Search" feature using Upstash Redis and vector embeddings for high-speed, contextual retrieval of application data.

Line-A-Link — Match and meet based on shared transit routes in Delhi Metro

React, Next.js, TypeScript, Socket.io, Tailwind CSS, GTFS data, Clerk, PostgreSQL, Groq and OpenAI APIs | October 2025 – December 2025

- Engineered a relational PostgreSQL database by parsing GTFS transit data, mapping all Delhi Metro stations and lines to enable dynamic user route registration.
- Implemented Breadth-First Search (BFS) traversal algorithms to compute optimal transit paths, minimizing latency in route overlap calculations which are utilized for profile recommendations.
- Developed a modular user interface using Tailwind CSS, integrating an interactive map component with a custom route highlighter to visualize user transit trajectories.
- Integrated Socket.io to establish real-time, bidirectional WebSocket connections, facilitating low-latency messaging environments for matched profiles.
- Leveraged OpenAI and Groq APIs to dynamically generate context-aware conversational icebreakers, utilizing shared transit data to automate initial user interactions.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering

Dr. Akhilesh Das Gupta Institute of Technology & Management (ADGITM), New Delhi, India

CGPA: 8.6 | Sep 2023 – Jul 2027 (Expected)
